Primary Database

West US (Oregon)

us-west-2 · t4g.nano

The screenshot shows the Supabase web interface in a browser. The address bar displays 'supabase.com/d...'. The top navigation bar includes a search icon, a 'main' link, and an 'Upgrade to Pro' button. Below the navigation bar, there's a 'Feedback' section with several icons. The main content area is titled 'PostgreSQL Version Check' and contains a SQL query editor with the following code:

```
1 -- This query checks the version of your PostgreSQL database
2 SELECT version();
```

Below the query editor, there's a toolbar with buttons for 'Results', 'Explain', 'Chart', 'Export', 'Source', 'Primary Database', 'Role postgres', and a 'Run' button. The 'Results' tab is selected, showing the output of the query:

version
PostgreSQL 17.6 on aarch64-unknown-linux-gnu, compiled by gcc (GCC)

Supabase eliminates the longer setup times, has scalability at the click of a button, and doesn't require your own hardware to keep it accessible.
